

PURE DYNASTY

ELITE SEEDED PASPALUM with ACCe Technology™

Pure Dynasty with ACCe™ is the market's first herbicide-resistant seeded paspalum. Developed by Pure-Seed Testing using ACCe technology from the University of Georgia, Pure Dynasty with ACCe features all of the advanced characteristics of the original Pure Dynasty with the added benefit of improved tolerance to ACCe-inhibiting herbicides including sethoxydim, fenoxaprop, fluazifop-butyl, and pinoxaden. This allows for control of unwanted annual and perennial grasses such as bermudagrass, crabgrass, goosegrass, tropical signal grass, and more.

The herbicide resistance of Pure Dynasty with ACCe makes turf conversions easier than ever. Simply interseed Pure Dynasty with ACCe into the existing turf stand. Once the new paspalum is established, the old turf can be sprayed out with any of the approved herbicides. In most cases, the project can remain open for play throughout the transition.

In addition to turf conversions, Pure Dynasty with ACCe is also the ideal choice for new projects where weeds and off-type grasses pose a challenge during grow-in, such as locations where fumigating before planting is restricted.

Pure Dynasty with ACCe is non-genetically modified, utilizing natural breeding practices.

Applications

Product Features

- Herbicide resistance
- Superior salt tolerance
- Quick germination and faster establishment
- Tighter density
- Improved disease resistance
- Stronger overall performance
- Reduced mowing heights for wall-to-wall applications

Characteristics

Color	Dark Green
Fall Color Retention	Excellent
Spring Green-Up	Excellent
Establishment	Rapid
Wear Tolerance	Excellent
Injury Recovery	Very Good
Heat Tolerance	Very Good
Cold Tolerance	Good
Shade Tolerance	Very Good
Drought Tolerance	Very Good
Salt Tolerance	Excellent
Mowing Heights	0.08" – 3" (2.03 mm – 76.2 mm)

The recommended seeding rate for coated seed is 65-130 pounds per acre (73-146 kilograms per hectare).
